

FAUX MINERAL FIBER CEILING TILES

MirroFlex™ Mineral Fiber Ceiling Tiles offer customers the ability to replace their standard mineral fiber ceilings with a long-lasting solution that prevents dirty, water stained ceilings. Our faux mineral fiber ceiling tiles are waterproof thermoplastic ceiling tiles that provide flexibility, durability and an easy to clean surface.

Available in 2' x 2' size for lay-in ceiling applications, this revolutionary tile is flat with tegular/revealed edges which allows the panel to drop below the grid providing unique architectural dimension.

ATI offers an easy-to-install, hold-down clip system to help support lay-in ceiling tiles. This clip system attaches to the top of any existing grid to hold lay-in ceiling tiles (low or high profile) in place, preventing the tiles from flipping out of place from air leaks and creating a smooth visual. The clip system is only necessary if there are no existing tiles in place to support new MirroFlex lay-in tiles.

For more information on solutions available from ATI Decorative Laminates, please call 800.849.1320.
