

DECORATIVE ACOUSTIC CEILINGS

ATI's **MirroFlex™ Decorative Acoustic Ceilings** now offer customers the ability to add a decorative component to their suspended ceilings with the added benefit of noise absorption. Unlike other acoustic ceiling tiles which are flat and plain, ATI's decorative acoustic tiles are very affordable, and are available in a wide variety of decorative patterns formed into the perforated tile. Over 40 of our pattern designs are available to meet most traditional and contemporary design needs.

The perforated tiles come in 2' x 2' size for lay-in ceiling applications, and are available in black or white (paintable) - both in gloss or matte options. When used with existing mineral fiber tiles, our decorative acoustic tiles eliminate the need to discard current materials, and provide a higher NRC* rating when used in combination. The tiles are Class-A fire rated, light weight and easy to install.

MirroFlex perforated/acoustic ceiling tiles have a low minimum order quantity and are ready to ship in two weeks or less.

ATI offers an easy-to-install, hold-down clip system to help support lay-in ceiling tiles. This clip system attaches to the top of any existing grid to hold lay-in ceiling tiles (low or high profile) in place, preventing the tiles from flipping out of place from air leaks and creating a smooth visual.

For more information on solutions available from ATI Decorative Laminates, please call 800.849.1320.
